Prepared For:	Colour Bricks
Prepared By:	Livewires Digital Solutions
Version:	1.2
Date:	02 September 2026
Status:	Updated Requirement — For Client Review
Change Summary:	Adds Bank Statement Import & Bank Reconciliation, and related reporting, audit, permission and business-rule updates.
	Sections carried over unchanged from v1.1 keep their original content.

1. Introduction

Livewires Digital Solutions proposes to develop a Construction Project Financial Management System for Colour Bricks.

The application will provide a centralized platform to manage multiple construction projects and track:

- Project income and credits
- Project expenses and debits
- Labour and subcontractor expenses
- Material purchases
- Vendors and vendor payments
- Temple donations
- Customized work
- Personal expenses
- Office expenses
- Savings
- Loans and EMIs
- Project-wise outstanding
- Vendor-wise outstanding
- Project profitability
- Budget versus actual cost
- Cash and bank transactions
- Multi-project vendor payment allocation
- **Bank statement import and bank reconciliation**
- Role-based access
- Management reports and dashboards

2. Business Objectives

The primary objectives are to:

1. Manage all construction projects from a single application.
2. Track project-wise income and expenses.
3. Monitor project profitability.
4. Compare project budget against actual expenses.
5. Identify cost overruns.
6. Manage labour and subcontractor teams.
7. Maintain centralized vendor and item masters.
8. Avoid repeatedly entering the same vendors and materials.
9. Track vendor purchases and outstanding balances.
10. Track payments to vendors and subcontractors.
11. Support daily, weekly, monthly and ad-hoc payments.
12. Track temple donations for each project.
13. Support multiple temples for a project.
14. Track customized work.
15. Support different payment modes.
16. Maintain cash and bank balances.
17. Track personal, office and savings expenses.
18. Allocate common expenses across ongoing projects.
19. Track project loans and EMI payments.
20. Automatically distribute consolidated vendor payments across projects.
21. Maintain accurate vendor and project outstanding balances.
22. Provide comprehensive reports with filtering and date ranges.
23. Provide configurable role-based permissions.
24. Maintain an audit trail for important financial activities.

25. **Import bank statements (CSV/Excel) and reconcile them against recorded transactions.**
26. **Ensure manual entries and bank transactions are never double-counted.**

3. Application Modules

The application will contain the following major modules:

1. Dashboard
2. Project Management
3. Project Income
4. Project Expense Management
5. Labour & Subcontractor Management
6. Vendor Management
7. Material/Item Management
8. Temple Donation Management
9. Customized Work Management
10. Payment Management
11. Cash & Bank Account Management
12. **Bank Statement Import & Reconciliation**
13. Budget & Cost Control
14. Project Profit/Loss
15. Personal Expenses
16. Office Expenses
17. Savings Management
18. Common Expense Allocation
19. Loan Management
20. EMI Management
21. Vendor Payment Allocation
22. Reports & Analytics
23. User Management
24. Role Management
25. Permission Management
26. Admin Configuration
27. Audit Trail

4. Project Management

A centralized Project Master will be maintained.

Project Details

- Project ID
- Project Name
- Client Name
- Site Address
- Contact Details
- Project Start Date
- Expected Completion Date
- Actual Completion Date
- Project/Contract Value
- Estimated Project Cost
- Expected Profit
- Project Status
- Project Manager
- Notes
- Attachments

Project Status

- Ongoing
- Completed
- On Hold
- Cancelled

Users will be able to view projects based on status.

5. Project Dashboard

When a user selects a project, the system should display a complete financial overview.

Summary

- Project Value
- Estimated Cost
- Actual Cost
- Total Income
- Total Expenses
- Total Paid
- Total Outstanding
- Current Balance
- Expected Profit
- Actual Profit
- Profit %
- Budget Utilisation %

Expense Breakdown

- Building Construction / Mesthri
- Interior
- Plumbing
- Electrical
- Materials
- Vendors
- Customized Work
- Temple Donations
- Personal/Common Expenses
- Office/Common Expenses
- Savings Allocation
- Loan/EMI
- Other Expenses

Users should be able to click summary figures and drill down into the underlying transactions.

6. Project Income / Credits

The system will allow users to record all income received against a project.

Examples:

- Client Advance
- Stage Payment
- Milestone Payment
- Additional Payment
- Final Payment
- Other Project Income

Transaction Details

- Project
- Transaction Date
- Transaction Type
- Amount
- Payment Mode
- Cash/Bank Account
- Reference Number
- Description
- Attachment
- Created By
- Created Date

Allocation rule: every project income/credit transaction is recorded against **exactly one project**. See Section 34 (Credit / Receipt Allocation Rule) for the rule as it applies to bank-sourced credits.

7. Project Expenses / Debits

The system will track all expenses associated with a project.

Expense categories include:

- Labour
- Building Construction
- Interior
- Plumbing
- Electrical
- Materials
- Vendor Purchases
- Customized Work
- Temple Donation
- Common Expense Allocation
- Loan/EMI
- Other Expenses

8. Labour & Subcontractor Management

Multiple departments and multiple teams should be supported.

Initial Departments

- Mesthri / Building Construction
- Interior
- Plumbing
- Electrical

Additional departments can be created through administration.

Example

Electrical

- Electrical Team A
- Electrical Team B
- Electrical Team C

Plumbing

- Plumbing Team A
- Plumbing Team B

9. Subcontractor / Team Master

Each subcontractor/team can contain:

- Team/Subcontractor ID
- Name
- Department
- Contact Person
- Phone
- Email
- Address
- Payment Terms
- Bank Details
- Active/Inactive

A subcontractor/team can work on multiple projects.

10. Labour / Subcontractor Work

The system should record:

- Project
- Department
- Team/Subcontractor
- Work Type
- Work Description
- Work Date
- Agreed Work Value
- Amount Paid
- Outstanding Amount
- Payment Date
- Payment Mode
- Cash/Bank Account
- Reference
- Remarks

Payment Frequency

- Daily
- Weekly
- Monthly
- Milestone-based
- Ad-hoc

Outstanding

Outstanding = Agreed Work Value – Total Paid

11. Vendor Management

A centralized Vendor Master will be maintained.

Examples:

- Hardware Shops
- Cement Agencies
- Brick Agencies
- Sand Suppliers
- Steel Suppliers
- Plumbing Suppliers

- Electrical Suppliers
- Paint Suppliers
- Tile Suppliers
- Interior Suppliers
- Machinery Suppliers

A vendor should only need to be created once.

12. Vendor Master

Vendor information:

- Vendor ID
- Vendor Name
- Vendor Category
- Contact Person
- Phone
- Email
- Address
- GST Number
- Bank Details
- Payment Terms
- Active/Inactive

13. Automatic Vendor Creation

During the first transaction:

+ Add New Vendor

The vendor will automatically be added to the Vendor Master.

For subsequent transactions:

Search Vendor → Select Vendor

The system should provide:

- Search box
- Autocomplete
- Existing vendor list
- Add New Vendor option

Duplicate vendors should be prevented wherever possible.

14. Material / Item Master

A centralized Item Master will be maintained.

Examples:

- Cement
- Bricks
- Sand
- Steel
- Pipes
- Electrical Cables
- Switches
- Tiles
- Paint

- Doors
- Windows
- Hardware Items
- Plumbing Items
- Interior Materials

Item Details

- Item ID
- Item Name
- Category
- Unit
- Default Rate
- Tax/GST
- Active/Inactive

15. Automatic Item Creation

When entering a purchase:

Search Item or + Add New Item

The first-time item will automatically be added to the Item Master. Future users can simply search and select it.

16. Material Purchase Management

Material purchases should be recorded against projects.

Example

Project A — Vendor: ABC Cement Agency

Item	Quantity	Rate	Amount
Cement	100 Bags	₹400	₹40,000
Sand	2 Loads	₹15,000	₹30,000
Total			₹70,000

Purchase information

- Project
- Vendor
- Purchase Date
- Invoice Number
- Items
- Quantity
- Unit
- Rate
- Tax
- Total Amount
- Amount Paid
- Outstanding
- Payment Mode
- Account
- Reference
- Attachment

17. Vendor Purchase & Outstanding

Example

- Purchase: ₹2,00,000
- Initial Payment: ₹50,000
- Vendor Outstanding: ₹1,50,000

The system will maintain the complete purchase and payment history.

18. Vendor Payments

Vendor payments can be:

- Full
- Partial
- Daily
- Weekly
- Monthly
- Ad-hoc
- Multiple payments against a purchase

Example

- Purchase = ₹2,00,000
- Payment 1 = ₹50,000 → Outstanding = ₹1,50,000
- Payment 2 = ₹75,000 → Outstanding = ₹75,000

19. Multi-Project Vendor Payment Allocation

A vendor may have outstanding balances across several projects.

The Accounts Team should be able to make one consolidated payment to a vendor, and the system should automatically distribute the payment across the relevant projects.

Default Method: FIFO - First In, First Out

The oldest outstanding balance will be settled first.

This same allocation mechanism is also used when a **bank transaction** is reconciled against a vendor and needs to be split across multiple projects — see Section 35 (Debit / Payment Allocation Rule).

20. Vendor Payment Allocation Example

Vendor: ABC Hardware

Project	Outstanding
Project A	₹25,000
Project B	₹10,000
Project C	₹30,000
Project D	₹50,000
Total	₹1,15,000

Vendor payment: ₹1,00,000

System allocation

Project	Before	Allocated	After
Project A	₹25,000	₹25,000	₹0
Project B	₹10,000	₹10,000	₹0
Project C	₹30,000	₹30,000	₹0
Project D	₹50,000	₹35,000	₹15,000
Total	₹1,15,000	₹1,00,000	₹15,000

21. Vendor Outstanding & Project Outstanding

Before payment: Vendor Outstanding = ₹1,15,000

Payment: ₹1,00,000

After payment: Vendor Outstanding = ₹15,000

At the same time:

- Project A outstanding → ₹0
- Project B outstanding → ₹0
- Project C outstanding → ₹0
- Project D outstanding → ₹15,000

The vendor and project balances must remain synchronized.

22. No Duplicate Expense Rule

The system must distinguish between:

Purchase / Expense and **Payment / Settlement**

Example

Purchase: ₹25,000

System records:

- Project Expense = ₹25,000
- Vendor Outstanding = ₹25,000

Later: Vendor Payment = ₹25,000

System records:

- Vendor Outstanding = ₹0
- Cash/Bank reduces by ₹25,000
- Project payable reduces by ₹25,000

The payment must not create another ₹25,000 expense.

The same principle applies when the payment later shows up as a **bank transaction** during reconciliation — see Section 37 (Data Integrity / No Double Counting).

23. Vendor Payment Allocation History

Each consolidated payment should maintain allocation details.

Example

Payment: ₹1,00,000

Project	Allocated
Project A	₹25,000
Project B	₹10,000
Project C	₹30,000
Project D	₹35,000
Total	₹1,00,000

Users should be able to view the complete allocation history.

24. Manual Vendor Allocation Override

Authorized users can manually override FIFO allocation where required.

Any manual override should be recorded in the audit trail.

25. Vendor Payment Greater Than Outstanding

Example

Vendor Outstanding: ₹80,000 Payment: ₹1,00,000 Excess: ₹20,000

The excess should be recorded as **Vendor Advance / Credit Balance**, which can be adjusted against future purchases.

26. Temple Donation Management

Each project may have a percentage or fixed amount reserved for temple donations.

The system should support:

- Temple Master
- Multiple temples per project
- Percentage-based donation
- Fixed donation
- Donation allocation
- Donation payments
- Donation outstanding
- Payment Mode
- Cash/Bank Account
- Receipt/Reference

Example

- Project Value = ₹1 Crore
- Donation = 2%
- Donation Amount = ₹2 Lakhs

The amount may be distributed across multiple temples.

27. Customized / Ad-Hoc Work

The system should support additional work not included in predefined work categories.

Examples:

- Additional construction
- Additional electrical work

- Additional plumbing
- Additional interior work
- Emergency work
- Client-requested changes
- Additional materials
- Additional labour

Information captured:

- Project
- Department
- Work Type
- Description
- Vendor/Subcontractor
- Estimated Cost
- Actual Cost
- Paid Amount
- Outstanding
- Date
- Payment Mode
- Account
- Reference

28. Payment Mode Management

Payment Mode will be maintained as a configurable master.

Initial modes

- Cash
- Bank Transfer
- UPI
- Cheque
- Credit Card
- Debit Card
- Online Transfer
- Other

Payment Mode will be available across:

- Project Income
- Vendor Payments
- Labour Payments
- Subcontractor Payments
- Temple Donations
- Personal Expenses
- Office Expenses
- Savings
- Loan EMI
- Other Transactions

29. Cash & Bank Account Management

The system should support multiple accounts.

Cash

- Office Cash
- Site Cash

Bank

- HDFC
- SBI
- ICICI
- Other Bank Accounts

Every applicable financial transaction should record: **Payment Mode + Account**

30. Transaction Entry Sources (New)

The system will support **two primary transaction-entry methods**, feeding the same underlying financial ledger described throughout this document.

30.1 Manual Entry

Accounts users can directly enter transactions into the system, as already described in Sections 6–29 above (project income, vendor purchases, labour expenses, vendor payments, client receipts, cash transactions, and so on).

Manual entries become available immediately in the relevant project, vendor, client and financial reports. The system does not require the user to wait for a bank statement.

30.2 Bank Statement Entry

Users can upload bank statements (see Section 31). Imported transactions initially remain in **Pending** status until matched or reconciled (see Sections 32–33).

31. Bank Statement Import (New)

Users can upload bank statements in:

- CSV
- Excel

The system will extract available information such as:

- Transaction date
- Narration
- Debit
- Credit
- Amount
- Bank reference/UTR
- Transaction description

Imported transactions initially remain in **Pending** status.

The system should check for duplicate transactions before creating/importing them, so the same statement line cannot be imported twice.

32. Bank Reconciliation Flow (New)

Bank reconciliation matches bank statement transactions with transactions already recorded in the system (manual or previously imported).

The system should use available information such as:

- Narration
- Vendor name
- Client name
- Amount
- Date
- Bank reference/UTR
- Existing manual transactions
- Historical matching information

to suggest the appropriate match. The accountant must be able to accept or change the suggested match.

Example — matching an existing manual entry

Accounts manually records: **ABC Hardware Payment - ₹1,00,000**

Later the bank statement contains: **ABC Hardware - Debit ₹1,00,000**

Manual Payment ₹1,00,000

↓
Bank Transaction ₹1,00,000

↓
Match

↓
Reconciled

The system must not create a second ₹1,00,000 payment (see Section 37).

33. Reconciliation Status (New)

Bank transactions should have statuses such as:

- Pending
- In Review
- Reconciled
- Excluded

Remove / Exclude

If a transaction is removed from the reconciliation queue, it should be marked as **Excluded** rather than permanently deleted. This maintains auditability and prevents the same transaction from being imported repeatedly.

Unreconcile / Reverse

For a wrongly reconciled transaction, authorized users should be able to **Unreconcile/Reverse** it with appropriate audit tracking (see Section 65, Audit Trail).

34. Credit / Receipt Allocation Rule (New)

A bank credit/client receipt must belong to **one project only** — consistent with the Project Income rule already stated in Section 6.

Example

Bank Credit ₹5,00,000

↓

Client: ABC Builders

↓

Project A

↓

Project Credit ₹5,00,000

The credit allocation screen must not allow a single client receipt to be split across multiple projects.

Reconciling a credit will update:

- Bank balance
- Client received amount
- Project credit
- Client outstanding
- Project ledger

35. Debit / Payment Allocation Rule (New)

A bank debit/payment can belong to:

- One project, or
- Multiple projects

This extends the Multi-Project Vendor Payment Allocation described in Sections 19–20 to bank-sourced transactions, and is particularly relevant for vendors who supply materials or services to multiple projects.

Example

Bank payment: **ABC Hardware - ₹1,00,000**

Project	Allocation
Project A	₹25,000
Project B	₹10,000
Project C	₹30,000
Project D	₹35,000
Total	₹1,00,000

Validation

Bank Debit = Total Project Allocations
₹1,00,000 = ₹1,00,000

If there is a difference, the system should not allow reconciliation until the difference is resolved.

One Bank Transaction → One Vendor Payment → Multiple Project Allocations. The bank transaction itself always remains a single transaction; the reconciliation screen can display a summary such as **Project(s): 4 Projects**, with a **View** option to see the detailed allocation.

Where sufficient outstanding information exists, the system should propose an allocation based on project outstanding amounts (using the same FIFO logic as Section 19), which the accountant can accept or manually modify.

36. Internal Bank Transfer (New)

Transfers between company bank accounts should be treated separately from project transactions.

Example

HDFC Debit ₹2,00,000

↓

Internal Transfer

↓

SBI Credit ₹2,00,000

This must **not** be treated as:

- Project expense
- Project income
- Vendor payment
- Client receipt

The overall company financial position remains unchanged.

37. Data Integrity / No Double Counting (New)

Building on the No Duplicate Expense Rule in Section 22, the system must ensure that the same financial event is never counted twice across manual entry and bank reconciliation.

Manual Payment ₹1,00,000

+

Bank Statement ₹1,00,000

↓

NOT ₹2,00,000

↓

One Payment ₹1,00,000

linked to Bank Transaction

Similarly, project allocations of a single multi-project vendor payment (Section 35) are linked allocations of the same payment, not additional bank payments:

Vendor Payment ₹1,00,000

↓

Project A ₹25,000 · Project B ₹10,000 · Project C ₹30,000 · Project D ₹35,000

↓

Total ₹1,00,000

38. Reconciliation Control Reports (New)

The system must provide financial control reports to ensure that transactions tally correctly.

Control	Formula
Bank	Opening Bank Balance + Credits – Debits = Closing Bank Balance
Vendor	Purchases/Payables – Payments = Vendor Outstanding
Project	Project Payables – Project Payments = Project Outstanding
Client	Project Amount Due – Client Receipts = Client Outstanding
Multi-Project Payment	Bank Debit = Sum of Project Allocations

These controls will help identify discrepancies before final reporting.

39. Reconciliation Main Screen (New)

The reconciliation screen should provide columns such as:

Date	Bank	Description	Type	Credit	Debit	Client/Vendor/Project	Allocated	Difference	Status	Action
------	------	-------------	------	--------	-------	-----------------------	-----------	------------	--------	--------

For multi-project transactions, the Project column can display **Multiple / 4 Projects**; the user can select **View** to see the detailed project allocation.

Actions can include:

- View
- Review
- Match
- Reconcile
- Remove/Exclude
- Unreconcile, where authorized

40. Project Budget & Cost Control

Each project should have an estimated/approved cost.

The system will continuously compare: **Estimated Cost vs Actual Cost**

Example

- Estimated Cost = ₹80,00,000
- Actual Cost = ₹82,00,000

The system should show: **Budget Exceeded by ₹2,00,000**

41. Budget Monitoring

Expenses should be monitored by category.

Category	Budget	Actual	Variance
Labour	₹20L	₹19L	₹1L
Materials	₹35L	₹38L	₹3L Over
Electrical	₹5L	₹6L	₹1L Over

Suggested status:

- Within Budget
- Approaching Budget
- Budget Exceeded

Thresholds should be configurable.

42. Project Financial Ledger

Each project should have a complete credit/debit ledger.

Date	Description	Credit	Debit	Balance
01-Aug	Client Advance	₹10L	-	₹10L
03-Aug	Cement Purchase	-	₹1L	₹9L
05-Aug	Labour Payment	-	₹50K	₹8.5L
07-Aug	Electrical Work	-	₹40K	₹8.1L
10-Aug	Client Payment	₹5L	-	₹13.1L

Each transaction should be clickable for detailed information.

43. Project Profit & Loss

Basic calculation: **Project Profit = Project Revenue - Project Costs**

The system will display:

- Project Revenue
- Estimated Cost
- Actual Cost
- Gross Profit
- Profit %
- Budget Variance

44. Personal, Office & Savings Expenses

The system should support:

Personal Expenses

- Personal withdrawals
- Personal purchases
- Other personal expenses

Office Expenses

- Office rent
- Electricity
- Internet
- Salaries
- Stationery
- Travel
- Software
- Maintenance

Savings

- Savings allocation
- Savings transactions

45. Common Expense Allocation Across Ongoing Projects

Personal Expenses, Office Expenses and Savings will be treated as common/company-level expenses.

The system should allow the total amount to be distributed among ongoing projects.

Default Allocation Method: Equal Distribution

Formula: **Project Allocation = Total Common Expense ÷ Number of Ongoing Projects**

Completed, cancelled and on-hold projects will be excluded.

Example

For a particular period:

Expense Type	Amount
Personal Expenses	₹40,000
Office Expenses	₹35,000
Savings	₹25,000
Total	₹1,00,000

Suppose there are four ongoing projects:

Project	Allocation	Amount
Project A	25%	₹25,000
Project B	25%	₹25,000
Project C	25%	₹25,000
Project D	25%	₹25,000
Total	100%	₹1,00,000

If there are five ongoing projects: ₹1,00,000 ÷ 5 = ₹20,000 per project

46. Common Expense Allocation Methods

The system should support:

1. **Equal Distribution** — Total amount ÷ number of ongoing projects.
2. **Percentage Based** — e.g. Project A 40%, Project B 30%, Project C 20%, Project D 10%.
3. **Manual Distribution** — Accounts/Admin can manually specify the amount for each project.

Default: Equal Distribution

47. Common Expense Allocation History

Every allocation should maintain:

- Original Expense
- Expense Type
- Total Amount
- Allocation Method

- Projects
- Allocated Amount
- Allocation Date
- Created By

This allows management to trace how common expenses were distributed.

48. Loans & EMI

Projects may be financed through loans.

Loan Master

- Loan ID
- Project
- Bank/Lender
- Loan Amount
- Interest Rate
- Start Date
- Tenure
- EMI Amount
- EMI Start Date
- EMI End Date
- Outstanding Principal
- Status

EMI

- Project
- Loan
- EMI Date
- EMI Amount
- Principal
- Interest
- Payment Mode
- Account
- Reference
- Status

Reports

- Total Loan
- Principal Paid
- Interest Paid
- Outstanding Principal
- Upcoming EMI
- Overdue EMI

49. Project Reports

Project Financial Summary

- Project Value
- Estimated Cost
- Actual Cost
- Income
- Expenses
- Profit/Loss
- Profit %

Project Expense Report — Filters: Project, Category, Department, Vendor, Subcontractor, Payment Mode, Account, Date Range

Project Ledger — Complete credit/debit history.

Budget vs Actual — Budget, Actual, Variance, Variance %

Project Labour Report — Department/team-wise cost.

Project Material Report — Item, Quantity, Rate, Amount, Vendor, Date

Project Outstanding — Vendor Outstanding, Subcontractor Outstanding, Loan Outstanding, Other Outstanding

50. Vendor Reports

The system should provide:

Vendor Statement — Purchases, Payments, Allocations, Advances, Outstanding

Vendor Purchase Report — Vendor, Project, Item, Category, Date

Vendor Payment Report — Complete payment history.

Vendor Outstanding Report — Total Purchases, Total Paid, Outstanding

Vendor Project-wise Statement

Vendor	Project	Purchase	Paid	Outstanding
ABC	Project A	₹2L	₹1.5L	₹50K
ABC	Project B	₹1L	₹50K	₹50K

51. Vendor Payment Allocation Report

This report should show how one vendor payment was distributed.

Date	Vendor	Total Payment	Project	Allocated
26-Aug	ABC Hardware	₹1L	Project A	₹25K
26-Aug	ABC Hardware	₹1L	Project B	₹10K
26-Aug	ABC Hardware	₹1L	Project C	₹30K
26-Aug	ABC Hardware	₹1L	Project D	₹35K

52. Subcontractor / Labour Reports

Reports should include:

- Subcontractor Statement
- Department-wise Expense
- Team-wise Expense
- Project-wise Team Expense
- Payment History
- Outstanding Report
- Work Value vs Payment
- Date-wise Payment Report

53. Temple Donation Reports

- Project-wise Donation
- Temple-wise Donation
- Donation Percentage
- Donation Allocated
- Donation Paid
- Donation Outstanding
- Date-wise Donation

54. Loan Reports

- Project-wise Loans
- Loan Outstanding
- EMI Schedule
- EMI Paid
- EMI Pending
- Principal vs Interest
- Date-wise EMI Payments

55. Cash & Bank Reports

Account Statement — Opening Balance, Credits, Debits, Closing Balance

Payment Mode Report

Payment Mode	Received	Paid
Cash	₹5L	₹3L
Bank Transfer	₹20L	₹15L
UPI	₹4L	₹2L
Cheque	₹2L	₹1L

Bank-wise Report — Transactions grouped by bank account.

Bank Reconciliation Report (*New*) — Reconciled vs unreconciled bank transactions, by account and period.

Pending Reconciliation Report (*New*) — All bank transactions currently in Pending or In Review status.

Excluded Transaction Report (*New*) — All transactions marked Excluded, with the reason and user who excluded them.

Bank Reconciliation Exceptions (*New*) — Transactions where the bank amount and total project allocation do not match, or where no suggested match was found.

56. Company-Level Reports

Management reports:

- Overall Income
- Overall Expenses
- Overall Profit/Loss
- Ongoing Projects
- Completed Projects
- Project-wise Profitability

- Vendor Outstanding
- Subcontractor Outstanding
- Loan Outstanding
- Cash Position
- Bank Position
- Expense Category Analysis
- Monthly Income vs Expense
- Monthly Profit/Loss
- Common Expense Allocation

57. Report Filters & Sorting

Reports should support:

Filters

- Project
- Vendor
- Subcontractor
- Department
- Item
- Category
- Payment Mode
- Account
- Payment Status
- Transaction Type
- **Reconciliation Status** (*New*)
- Date From
- Date To

Date Filters

- Today
- Yesterday
- This Week
- Previous Week
- This Month
- Previous Month
- Current Year
- Previous Year
- Custom Date Range

Functions

- Search
- Sort
- Pagination
- Column selection
- Grouping
- Export to Excel
- Export to PDF
- Print
- Reset Filters

58. Role-Based Access Control

The application will implement: **User → Role → Module → Action**

Optional: **User → Role → Project Access**

59. User Management

Administrator should be able to:

- Add User
- Edit User
- Activate User
- Deactivate User
- Delete User where permitted
- Assign Role
- Assign Projects
- Reset access

User Details

- Name
- Username/Email
- Mobile
- Role
- Department
- Status
- Assigned Projects

60. Role Management

Administrator should be able to:

- Add Role
- Edit Role
- Activate/Deactivate Role
- Delete Role where permitted
- Configure Permissions
- Assign Users

Suggested Roles

- **Administrator** — Full access.
- **Accounts Team** — Financial data entry/update.
- **Project Manager** — Project-related access.
- **Management** — Dashboard and reporting.
- **Data Entry User** — Limited data entry.

Additional roles can be created.

61. Admin Configuration - Module Permissions

A dedicated **Admin → Role & Permission Configuration** page will allow administrators to enable/disable modules for each role.

Example — Accounts Team

Enabled:

- Projects
- Project Income
- Project Expenses
- Vendors
- Materials
- Labour/Subcontractors
- Temple Donations
- Payments

- **Bank Statement Import & Reconciliation** (*New*)
- Loans
- Reports

Disabled:

- User Management
- Role Management
- System Configuration

If a module is disabled, it should not be visible in the user's menu.

62. Granular Permissions

Each module should support:

- View
- Add
- Edit
- Delete
- Approve
- **Reconcile** (*New*)
- Export
- Print

Example

Module	View	Add	Edit	Delete	Approve	Reconcile	Export
Projects	✓	✓	✓	✗	✓	—	✓
Vendors	✓	✓	✓	✗	✗	—	✓
Materials	✓	✓	✓	✗	✗	—	✓
Expenses	✓	✓	✓	✗	✓	—	✓
Payments	✓	✓	✓	✗	✓	—	✓
Bank Reconciliation	✓	✓	✓	✗	✓	✓	✓
Reports	✓	✗	✗	✗	✗	—	✓
Users	✓	✓	✓	✓	✗	—	✗
Roles	✓	✓	✓	✓	✗	—	✗

Actual permissions will be configurable by the Administrator.

63. Accounts Team

Accounts users may have access to:

- Project Income
- Project Expenses
- Vendor Purchases
- Vendor Payments
- Vendor Payment Allocation
- Subcontractor Payments
- Temple Donations
- Personal Expenses
- Office Expenses
- Savings
- Loan Transactions
- EMI Payments
- Payment Modes

- Cash/Bank Transactions
- **Bank Statement Import** *(New)*
- **Bank Reconciliation, where authorized** *(New)*
- Financial Reports

The Administrator can change these permissions.

64. Project-Level Access

Users may optionally be restricted to selected projects.

Example

Project Manager A

Can access: Project A, Project B

Cannot access: Project C, Project D

65. Audit Trail

Important activities should be logged.

Audit information

- User
- Date/Time
- Module
- Action
- Record ID
- Old Value
- New Value
- **Reconciliation Status** *(New)*
- **Reconciliation User** *(New)*
- **Reconciliation Date** *(New)*
- **Unreconciliation/Reversal history** *(New)*

Examples

- User edited Vendor Payment VP1024.
- Admin changed Accounts Team permissions.
- **Accountant reconciled Bank Transaction BT2045 against Vendor Payment VP1024.** *(New)*
- **Accountant unreconciled Bank Transaction BT2045 — reason: wrong match.** *(New)*

Financial transactions should preferably use **Cancel**, **Reverse** or **Void** instead of permanent deletion. Excluded bank transactions follow the same principle (see Section 33).

66. Notifications & Alerts

The system may notify users when:

- Project budget is exceeded
- Project approaches budget
- Vendor payment is overdue
- Subcontractor payment is overdue
- EMI is due
- EMI is overdue
- Project profitability falls below threshold

- Vendor outstanding reaches a configured limit
- **New bank transactions are imported and pending reconciliation** *(New)*
- **A bank debit and its project allocations do not match** *(New)*

Notifications can be: Dashboard, Email, or Both.

67. Document Attachments

Users should be able to attach:

- Vendor Invoice
- Purchase Bill
- Payment Receipt
- Bank Transfer Proof
- Cheque Copy
- Donation Receipt
- Loan Documents

68. Recommended Navigation

Dashboard

- Company Dashboard
- Project Dashboard

Projects

- Ongoing Projects
- Completed Projects
- Project Master
- Project Ledger
- Project Income
- Project Expenses
- Project Budget
- Project Profit/Loss

Vendors

- Vendor Master
- Purchases
- Payments
- Outstanding
- Statements
- Payment Allocation

Labour / Subcontractors

- Departments
- Teams
- Work Entries
- Payments
- Outstanding
- Statements

Materials

- Item Master
- Item Categories
- Purchases

Temple Donations

- Temple Master
- Project Donations
- Donation Payments
- Reports

Loans

- Loan Master
- EMI Schedule
- EMI Payments
- Outstanding

Other Expenses

- Personal Expenses
- Office Expenses
- Savings
- Common Expense Allocation
- Customized Expenses

Accounts

- Cash Accounts
- Bank Accounts
- Payment Modes
- Transactions
- **Bank Statement Upload** *(New)*
- **Reconciliation Queue** *(New)*
- **Reconciled Transactions** *(New)*
- **Excluded Transactions** *(New)*

Reports

- Project Reports
- Vendor Reports
- Subcontractor Reports
- Material Reports
- Donation Reports
- Loan Reports
- Cash/Bank Reports
- **Bank Reconciliation Reports** *(New)*
- Profit/Loss
- Outstanding
- Budget vs Actual
- Common Expense Allocation

Administration

- Users
- Roles
- Permissions
- Module Configuration
- Masters
- Audit Logs
- System Settings

69. Phase-Wise Implementation

Phase 1 - Core Project Financial Management

- Project Management
- Project Dashboard

- Project Income
- Project Expenses
- Budget vs Actual
- Project Profit/Loss
- Vendor Master
- Material Master
- Vendor Purchases
- Vendor Outstanding
- Labour/Subcontractor Management
- Temple Donations
- Customized Work
- Payment Modes
- Cash/Bank Accounts
- **Bank Statement Import (CSV/Excel) (New)**
- **Bank Reconciliation (matching, statuses, control reports) (New)**
- **Multi-project debit allocation via reconciliation (New)**
- User Management
- Role Management
- RBAC
- Admin Configuration
- Audit Trail
- Basic Reports

Phase 2 - Additional Expenses

- Personal Expenses
- Office Expenses
- Savings
- Common Expense Allocation
 - Equal distribution
 - Percentage-based distribution
 - Manual distribution
 - Allocation history
- Additional reports

Phase 3 - Loans & EMI

- Loan Master
- Project Loans
- EMI Schedule
- EMI Payments
- Principal Tracking
- Interest Tracking
- Outstanding Loan
- EMI Alerts
- Loan Reports

Phase 4 - Advanced Vendor Payment Allocation

- Consolidated Vendor Payment
- Multi-project allocation
- FIFO allocation
- Partial allocation
- Full allocation
- Vendor advance
- Manual override
- Allocation history
- Project-wise outstanding update
- Vendor outstanding update
- Project ledger settlement
- Cash/Bank update

- Audit trail
- Allocation reports
- **Automatic outstanding-based allocation suggestions for reconciled bank debits** (New)

Phase 5 - Advanced Reporting & Analytics

- Advanced Project Reports
- Vendor Analytics
- Subcontractor Analytics
- Project Profitability
- Cash Flow
- Bank-wise Reports
- **Bank Reconciliation Analytics (pending, exceptions, ageing)** (New)
- Expense Trends
- Monthly/Annual Comparison
- Advanced Dashboards
- Excel Export
- PDF Export
- Advanced Filtering
- Additional Management Reports

70. Key Business Rules

1. Every project must have a unique Project ID.
2. Every project should have an estimated/approved cost.
3. Financial transactions should be associated with the appropriate project.
4. One project can have multiple vendors.
5. One vendor can work across multiple projects.
6. One project can have multiple subcontractors.
7. One subcontractor can work across multiple projects.
8. One project can have multiple departments.
9. One department can have multiple teams.
10. Multiple temples can be associated with one project.
11. Temple donations can be percentage-based or fixed.
12. Partial payments must be supported.
13. Multiple payments against one purchase must be supported.
14. New vendors can be created during transaction entry.
15. New items can be created during transaction entry.
16. Existing vendors and items must be searchable.
17. Duplicate vendors/items should be prevented wherever possible.
18. Applicable payments must record Payment Mode.
19. Applicable payments must record Cash/Bank Account.
20. Project budget must be continuously compared against actual cost.
21. Budget overruns must be highlighted.
22. Vendor payments must support automatic multi-project allocation.
23. FIFO should be the default allocation method.
24. Authorized users may override automatic allocation.
25. Vendor-level outstanding must be updated after allocation.
26. Project-level outstanding must be updated after allocation.
27. Project ledger must reflect settlement.
28. Vendor payment must not create a duplicate expense.
29. Vendor payment allocation history must be maintained.
30. Vendor advances must be supported.
31. Completed projects must remain available for historical reporting.
32. Financial transactions should preferably be cancelled/reversed rather than permanently deleted.
33. Reports must support date filtering.

34. Reports must support searching and sorting.
35. User permissions must control module and action access.
36. Administrators must be able to configure permissions.
37. Project-level access should be supported.
38. Personal, Office and Savings expenses should initially be treated as common expenses.
39. Common expenses should be allocated only to ongoing projects.
40. Equal distribution should be the default common expense allocation method.
41. Percentage and manual allocation should also be supported.
42. Common expense allocation history must be maintained.
43. **A transaction can be entered manually or imported from a bank statement.** (New)
44. **Manual transactions must not be duplicated when the corresponding bank transaction is reconciled.** (New)
45. **Bank statement transactions remain pending until reviewed/reconciled.** (New)
46. **A credit/receipt can be allocated to only one project.** (New)
47. **A debit/payment can be allocated to one or multiple projects.** (New)
48. **Bank debit must equal the total project allocation before reconciliation.** (New)
49. **One bank transaction remains one bank transaction even when allocated to multiple projects.** (New)
50. **Internal bank transfers must not affect project income or expense.** (New)
51. **Excluded bank transactions should remain available for audit/duplicate protection.** (New)
52. **Only authorized users can reconcile, unreconcile or reverse financial transactions.** (New)
53. **Reports must derive totals from linked transaction records so that project, vendor, client and bank figures remain consistent.** (New)
54. **Any mismatch between transaction amount and allocation must be clearly highlighted.** (New)
